

**P&C Communications have over 25 years' experience in delivering complete business solutions including: - Telephony, Unified Communications and Network Infrastructures both Wired and Wireless.**

## **P&C Communications in partnership with RG Nets**

The Network infrastructure of any business is paramount and so must be designed with agility, ease of use and inherent resilience. P&C Communications, in partnership with RG Nets are able to offer a single hardware platform capable and dependable to provide a variety of functions complete within one single interface. This is a highly secure, multi-functional hardware appliance that offers a single interface for management and control of wired and wireless client devices.

## **Networking... Simplified!**

Available in several models and specifications, RG Nets RXg controllers incorporates the functions of what would previously have involved many separate systems and appliances:

- Router
- Firewall
- DHCP Server
- VLAN Administration
- Captive Portals
- Account administration and billing
- Content filtering and policy control
- Network management

## **Simplicity meets Versatility and Value**

A scalable solution fit for any environment from SMB's to high density environments such as Hotels, MDUs and Campus environments the RG Nets solution allows you to manage and support your end user population both efficiently and cost-effectively, encompassing accounts and payments, compliance and security and network management and threat mitigation, all accessed via a single dashboard. This simplicity and versatility allows seamless and rapid deployment, scalability and administration of Internet access to maximise profitability, reduce capital expenditure and ongoing operational costs.
