In-studio connectivity

The shift to the cloud means that fast, secure, and reliable connectivity on-set is critical.

Budget constraints, scheduling conflicts, or travel restrictions mean that key personnel often can't be physically present during production. And with the demand for more content pushing creative turnaround times to the limit, downtime in the studio is not an option.

Using cloud technologies expands the walls of the studio, allowing for real-time collaboration around the globe, streamlining and accelerating post-production workflows, and enabling high-quality live streams for engaging virtual events.

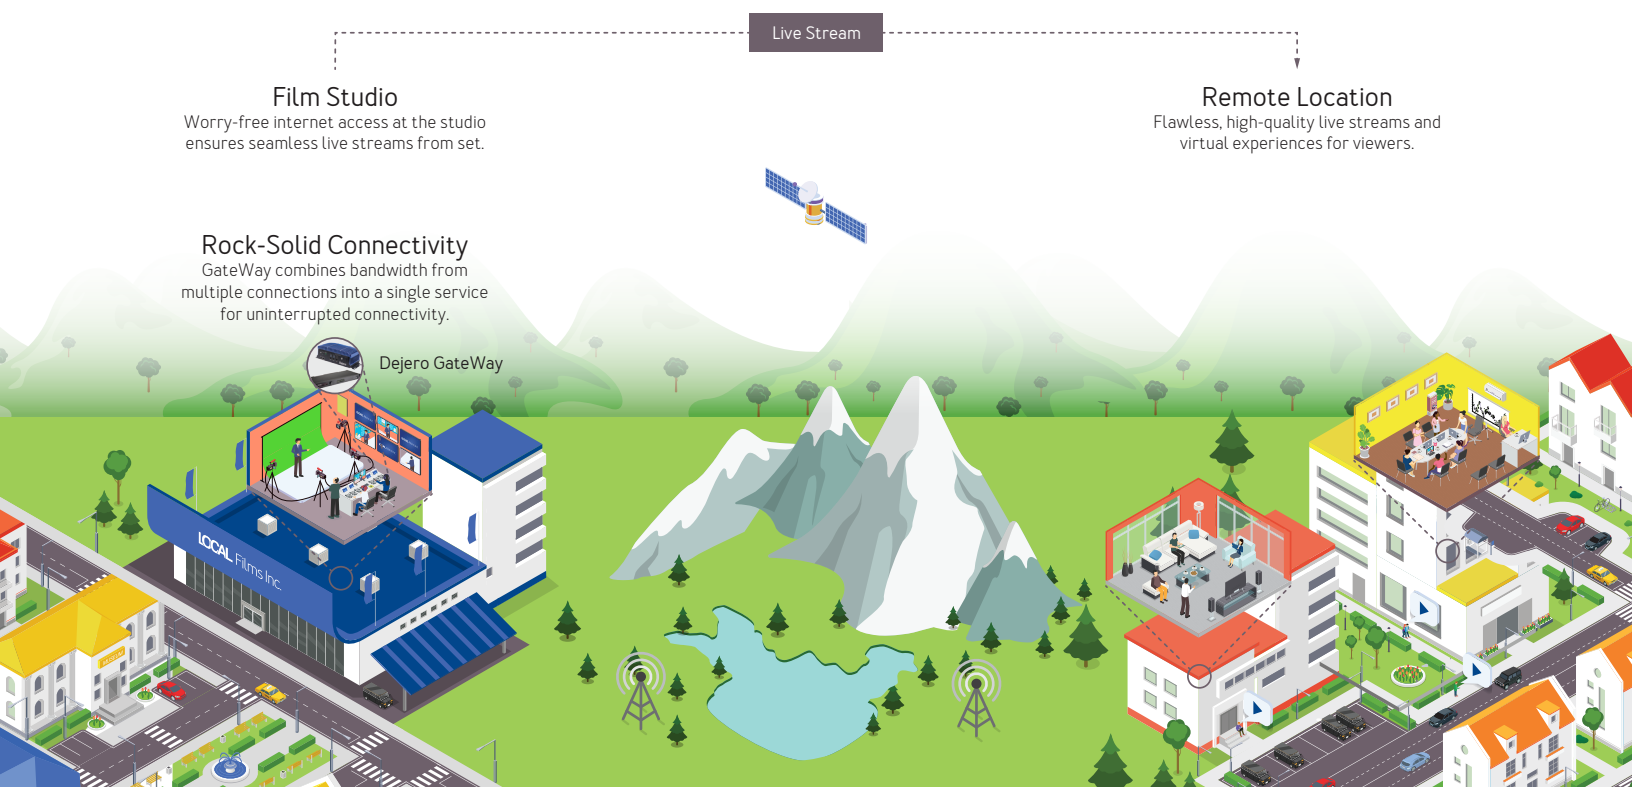

Stop relying on good enough connectivity that lets you down when you need it most.

In order to work in the cloud, you need to be connected to it. You need uninterrupted connectivity with the bandwidth to handle the job. Relying on a single connection at the studio puts productions at risk if that connection is interrupted or fails.

Dejero delivers rock-solid connectivity at the studio — providing a worry-free connectivity plan and ensuring a smooth and uninterrupted connection to the cloud.

Bringing resilient connectivity to film studios is advantageous for many reasons:

- **Expanded coverage:** By aggregating multiple network services into a single virtual 'network of networks' you have access to a greater coverage area than what a single carrier can deliver alone.
- **Greater bandwidth:** Leveraging the combined bandwidth potential of multiple connections allows you to achieve greater upload and download capacity.
- **Scalable solutions:** Flexible hardware and data packages ensure that your connectivity plan can scale to suit the needs of your production.
- **Workflow integration:** With the right connectivity backbone supporting your cloud workflows, you can speed up your projects and manage costs.

Delivering the Fast and Reliable Connectivity You Need On Set

Moving gigabytes (or even terabytes) of video and data requires a fast and reliable internet connection — and when it comes to providing fast and reliable connectivity, no one does it as well as Dejero.

Dejero GateWay

Designed with years of experience in providing critical connectivity across multiple industries, Dejero GateWay network aggregation devices deliver resilient connectivity for media production applications including video, data, and audio — augmenting existing studio infrastructure or bringing redundancy to fixed locations, like film studios.

Solution packages include purpose-built hardware, patented software, connectivity services, backed by 24/7 support.

GateWay comes with 3 or 6 modems and offers rack mounted or portable, fan-less options.

“We had a client who was streaming four cameras to a remote location. They already needed more upstream bandwidth than we could guarantee and they needed to know there was a back up in the case of failure. By combining our broadband and six 4G SIM cards — operating over four different networks — through the Dejero GateWay we were able to provide 120Mbps up all day long. If one of the SIM cards failed there were five others and the broadband to pick up the slack. It took away any stress of worrying about a failed connection. Impressive.”

Andy Woodruff, Managing Director, Camberwell Studios

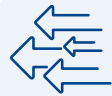

PopUp Connectivity supports businesses waiting for permanent Internet connections to be delivered. Additionally, we have seen requirements for temporary Wi-Fi networks to be in place for events or conferences, so that attendees can have quality reliable Internet access. All our solutions are flexible, scalable (load balance or blend multiple cellular data 4G SIM services). By working with the main mobile providers solutions can be tailored to meet your requirements.

Reliability

More reliable internet connection than solutions relying on a single carrier

Speed

Aggregated bandwidth for fast, bi-directional data transfer

Security

VPN support, dynamic routing of packets, and disk encryption for enhanced security

Simplicity

Easy to use, install, connect to external antennas, and configure

Flexibility

Static IP, Port Forwarding, and 1-1 NAT for enhanced configuration and network capabilities

Priority Routing

Define priority connections to help manage costs and customize network utilization

Dejero is the proud recipient of two Technology and Engineering Emmy® Awards that recognize our achievements in enabling remote connectivity and video transmission.
